

AVAILABILITY OF SOME NUTRIENT ELEMENTS IN FLOODED RICE SOILS FERTILIZED WITH ORGANIC AND MINERAL NITROGEN FERTILIZERS.

ABSTRACT

Two experiments (one in the green house as a pot, 2003 and the other as field 2004) were conducted using rice cultivars Sakha 101 rice variety during the summer season 2003 in the green house and 2004 at the Rice Research and Training Center Kafr El-Sheikh to study the effect of rice straw management practice (rice straw as a raw material and as a compost on: 1) Rice yield and its attributes, 2) Nutrients uptake, 3) Nutrients availability, 4) Soil organic matter and soil fertility status, 5) reduce the pollution and 6) reduce the expensive inorganic N fertilizer input and 7) Agronomic efficiency.

From this data we can concluded that:

1. The reaction and availability of fertilizers applied have to be considered with respect to economic production and environmental impact. The goal must be to sustain or increase soil fertility and to minimize environmental pollution.
- 2-Thus careful matching of fertilizer nitrogen and organic fertilizer application to crop needs can reduce nitrate leaching. The more efficient technology to reduce environmental pollution is using organic fertilizer which can instead of burning beside mineral fertilizer.
- 3- Integration of chemical fertilizer with organic fertilizer (crop residues such as rice straw as a raw material or compost rice straw) improved the yield especially when rice straw as a raw material with FYM as an activator added 3 weeks before transplanting.
- 4-Effective substitution of the recommended N dose of rice could be done up by compost which affect the bad environmental impact such as different forms of nitrogen and nitrate hazard beside the positive economic effect to reduce the expensive inorganic N fertilizer input of mineral nitrogen addition.
- 5-Combined application of rice straw and nitrogen had better build up of soil organic matter and supply valuable quantities of plant nutrients, which can help to meet crop fertilizer requirements and maintain soil fertility. Further studies might be needed especially microbial studies.

LIST OF FIGURES	
1. INTRODUCTION	1
2. REVIEW OF LITERATURE	3
2.1. Chemical properties of flooded soils	3
2.2. Effect of nitrogen and rice straw on yield and its attributes.....	4
2.3. Effect of nitrogen and rice straw fertilizer on nutrients uptake.....	8
2.4. Effect of nitrogen and rice straw fertilizer on the availability of some nutrients	10
2.5. Effect of nitrogen and rice straw on leachability of nitrate	13
2.6. Effect of nitrogen and rice straw fertilizer on organic matter	14
2.7. Effect of nitrogen and rice straw fertilizer on agronomic efficiency	16
3. MATERIALS AND METHODS.....	17
A. The Pot experiment	17
Treatments	20
B. The Field experiment	21
Preparing the compost	22
Studies characters	22
Grain yield and its attributes	22
1000 grains weight	23
Filled grain percentage	23
Unfilled grains	23
Plant and soil samples	23
Plant analyses	24
Method of plant analyses	24
Soil analyses	24
Method of soil analyses	24
Drainage water samples	25
Agronomic efficiency	25
Statistical analysis	25
4. RESULTS AND DISCUSSION.....	26
4.1. First experiment (Pot experiment, Rice straw)	26
4.1.1. yield and yield attributes	26
4.1.1.1. Grain and straw yield.....	26
4.1.1.2. 1000 grains weight	30
4.1.1.3. Number of panicles.....	30
4.1.1.4. Filled and unfilled grains percentage	32
4.1.1.5. Panicle length	33
4.1.2. Nutrients uptake by rice plants.....	33
4.1.2.1. Nitrogen uptake by rice plants.....	33

4.1.2.2. Phosphorus uptake by rice plants	38
4.1.2.3 Potassium uptake by rice plants	45
4.1.2.4. Iron uptake by rice plants	54
4.1.2.5. Manganese uptake by rice plants.....	58
4.1.2.6. Zinc uptake by rice plants.....	67
4.1.3. Nutrients availability in the soil	72
4.1.3.1. Ammonium availability.....	72
4.1.3.2. Nitrate concentration	77
4.1.3.3. Phosphorus availability	80
4.1.3.4. Potassium availability.....	83
4.1.3.5. Iron availability	86
4.1.3.6. Manganese availability.....	89
4.1.3.7. Zinc availability.....	92
4.1.4. Leachability of nitrate	95
4.1.5. Organic matter.....	97
4.1.6. Agronomic efficiency.....	97
4.1.7. Environmental impact of N fertilization	99
4.1.8. Correlation between some results	101
4.2. Second experiment (Field experiment, Composted rice straw)	108
4.2.1 Yield and yield attributes.....	108
4.2.1.1. Grain and straw yield.....	108
4.2.1.2. 1000 grains weight	110
4.2.1.3. Number of panicles.....	110
4.2.1.4. Panicle length	112
4.2.1.5 Filled and unfilled grains percentage	112
4.2.2. Nutrients uptake by rice plants.....	113
4.2.2.1. Nitrogen uptake by rice plants.....	113
4.2.2.2. Phosphorus uptake by rice plants	117
4.2.2.3. Potassium uptake by rice plants	121
4.2.2.4. Iron uptake by rice plants	125
4.2.2.5. Manganese uptake by rice plants.....	129
4.2.2.6. Zinc uptake by rice plants.....	133
4.2.3. Nutrients availability in the soil	137
4.2.3.1. Ammonium availability.....	137
4.2.3.2. Nitrate concentration	137
4.2.3.3. Phosphorus availability	142
4.2.3.4. Potassium availability.....	145
4.2.3.5. Iron availability	145
4.2.3.6. Manganese availability.....	150
4.2.3.7. Zinc availability.....	153
4.2.4. Organic matter.....	156
4.2.5. Agronomic efficiency	156
4.2.6. Correlation between some results.....	15.
