

ABSTRACT

There is an increased need for language translation in the modern world. Attempts of language translation are as old as computers themselves. Machine translation is the attempt to automate all, or part of the process of translating from one human language to another.

The present work reports our attempt in developing a bi-directional transfer-based machine translation system from Arabic to English and vice versa. The translation from Arabic to English and vice versa is very useful in developing expert systems in both languages. According to transfer approach of machine translation, the system consists of three main components analysis, transfer, and generation for each direction. The analysis component assigns grammatical structures to the input by means of source language grammatical rules and a source language lexicon. The transfer component builds target language equivalents of the source language grammatical structures by means of transfer rules that relate every source language representation to some corresponding target language representation. The generation component provides the target language translation. This involves the synthesis of the target language.

A major design goal of this system is that it can be used as an agent that provides services to remote users on the web and be specialized in the agricultural domain. The system is implemented in C++. Experiments on real sentences taken from expert systems in the agricultural domain are performed and results are reported.

Table Of Content

1 Introduction

1.1 Natural Language Processing.....	1
1.2 Machine Translation.....	2
1.3 Motivation.....	2
1.4 Scope and aim of the work.....	3
1.5 Structure of the thesis.....	3

2 Machine Translation

2.1 Machine translation characteristics.....	5
2.1.1 Automation Degree.....	5
2.1.1.1 Machine-aided human translation (MAHT)	6
2.1.1.2 Human-aided machine translation (HAMT)	6
2.1.1.3 Fully automatic machine translation (FAMT)	7
2.1.2 Number of languages.....	7
2.1.2.1 Bilingual systems.....	7
2.1.2.2 Multilingual systems.....	8
2.1.3 Directness.....	9
2.1.3.1 Direct systems.....	9
2.1.3.2 Indirect systems.....	9
2.1.4 Interactivity.....	10
2.1.4.1 Non-interventionist mode.....	10
2.1.4.2 Interactive mode.....	10
2.1.5 Domain.....	11
2.1.5.1 Domain dependency.....	11
2.1.5.2 Free textual restrictions.....	11
2.2 Machine Translation Engines.....	11
2.2.1 Traditional.....	12
2.2.1.1 Direct Architectures.....	12
2.2.1.2 Transfer Architectures.....	13
2.2.1.3 Interlingua Architecture.....	13
2.2.2 Non - Traditional.....	16
2.2.2.1 Statistical-Based MT (SBMT)	16
2.2.2.2 Dialogue-Based MT (DBMT)	19

2.2.2.1.4 Translation Memory (TM)	20
3 Agent Technology: A Review	
3.1 Agent technology.....	22
3.2 What is an agent?	22
3.3 Classification of agent	24
4 The Bi-directional Machine Translation Agent	
4.1 Overall structure of the system.....	31
4.2 English-Arabic bi-directional machine translation agent	33
4.2.1 Morphological analyzers.....	34
4.2.1.1 Arabic morphological analyzer.....	34
4.2.1.2 English morphological analyzer.....	36
4.2.2 Generic parser	40
4.2.3 Transfer component.....	41
4.2.3.1 Arabic to English transfer.....	41
4.2.3.2 English to Arabic transfer.....	45
4.2.4 Generation component.....	45
4.2.4.1 English generation component.....	45
4.2.4.2 Arabic generation component.....	49
5 Implementation Aspects.....	54
5.1 Morphological Analyzers.....	54
5.2 Generic Parser.....	55
5.3 Generation rules	57
5.4 Agentification of the tool	59
5.4.1 User Interface Agent.....	59
5.4.2 English-Arabic bi-directional machine translation agent.....	63
6 Evaluation of machine translation system.....	67
6.1 Review of Evaluation Methods.....	67
6.2 The Proposed Evaluation Methodology.....	69
6.3 Experiments.....	69
6.3.1 Testing translation from Arabic to English.....	70
Experiment 1.....	70
Experiment 2.....	72

6.3.2 Testing translation from English to Arabic.....	73
Experiment 1.....	73
Experiment 2.....	78
6.3.3 Translating an Expert system.....	76
6.3.4 Applying the developed agent on Expert System.....	81
6.4 Concluding Remarks.....	86
7 Conclusion And Future Work.....	87
7.1 Conclusion.....	87
7.2 Future Work.....	88
Refrences.....	89
