

## CONTENTS

Title	Page
<b>I. Introduction</b>	1
<b>II. Literature Review</b>	4
1-Phytochemical studies.	4
2. Toxicological studies.	6
2.1 Insecticidal activity of some plant extracts	6
2.1.1. <i>Myzus persicae</i> .	6
2.1.2. <i>Bemisia tabaci</i> .	19
2.2. Insecticidal activity of entomopathogenic fungi.	36
2.2.1. <i>Myzus persicae</i> .	36
2.2.2. <i>Bemisia tabaci</i> .	39
3. Biological studies.	44
<b>4. Biochemical studies</b>	46
<b>4.1. Biochemical effects of some plant extracts.</b>	46
<b>4.2. Biochemical effects of fungicide.</b>	47
5. Susceptibility of some potato varieties crops against.	47
5.1. Aphid <i>Myzus persicae</i>	47
5.2. <i>Bemisia tabaci</i> .	52
<b>6. Effect of the chemical contents of potato leaves on the population density of insect infestation.</b>	53
<b>III-MATERIALS AND METHODS</b>	55
1. Rearing technique	55
1.1. Rearing technique of potato aphid, <i>Myzus persicae</i> .	55
1.2 Rearing technique of sweet potato whitefly, <i>Bemisia tabaci</i> .	57
2. Tested materials.	57
2.1. Plant materials.	57
<b>2.1.1. Extraction technique of volatile oils (group A).</b>	59
2.1.1.1. Identification of volatile oils constituents	59
2.1.2. Extraction technique of fixed oils (group B).	60
2.1.2.1. Determination of free fatty acids.	60
2.1.2.2. Isolation of unsaponifiable fractions	60
2.2. Tested Biocide.	60
<b>3. Toxicological studies</b>	61
3.1. Preliminary insecticidal tests.	61
3.2. Bioassay tests	61
4. Biochemical studies.	62

4.1. Preparation of sample for biochemical assays.	62
4.2. Total proteins determination	63
4.3. Total carbohydrates determination	63
4.4. Total lipids determination	64
5. Susceptibility of certain potato varieties to the infestation with aphids and whitefly.	
6. Effect of certain climatic factors (means of temperature and relative humidity) on the population density of the dominant homopterous insect infesting potato plant.	65
7. Effect of the chemical contents of potato leaves on the population density insects infestation	66
7.1-Determination of protein content	66
7.2- Determination of carbohydrates content	66
7.3- Determination of phenol	66
7.4- Determination of PH value	66
7.5- Determination of K, P and N%	66
Statistical analysis	66
<b>IV-RESULTS</b>	67
<b>1. Phytochemical Studies.</b>	67
1.1. Extraction and identification of plant extracts.	67
1.1.1. Volatile oils.	67
1.1.2. Fixed oils.	102
1.1.2.1. Identification of free fatty Acids.	102
1.1.2.2. Identification of the unsaponifiable components.	105
<b>2. Toxicological studies.</b>	105
2.1. Toxicological effects against adult of <i>M. persicae</i> and nymphs of <i>B. tabaci</i> under laboratory conditions.	105
2.2. Susceptibility of <i>Myzus persicae</i> adult to the two volatile oils.	105
2.2.1. Susceptibility of adults of <i>Myzus persicae</i> and nymphs of <i>B. tabaci</i> to the two fixed oils.	109
2.2.2. Susceptibility of adults <i>Myzus persicae</i> and nymphs of <i>B. tabaci</i> to biozed.	112
2.3. Effect of tested treatments at their LC <sub>50</sub> on adult of <i>M. persicae</i> .	114
<b>3. Biological studies.</b>	115
- Biological activity of some plant treatments and one	115

biocides against the adult of <i>Myzus persicae</i> .	
<b>4. Biochemical studies.</b>	120
4.1. The total protein.	120
4.2. The total lipids.	121
4.3. The total carbohydrates.	121
5. Ecological studies on certain piercing sucking insects and their insect predators associated with different potato varieties cultivated in newly reclaimed sandy areas of El-Khattara district, Sharkia Governorate, Egypt .	126
5.1 Survey of insect pests and their predators associated with potato varieties.	126
5.1.2. Population density of insect pests infesting potato vegetable plants	126
5.1.3. Population density of insect predators associated with insect pests infesting potato vegetable plants.	127
5.2. Susceptibility of certain potato varieties to the infestation with aphids and whitefly.	128
5.2.1. Aphids ( <i>Myzus persicae</i> and <i>Aphis gossypii</i> ).	128
5.2.2. whitefly <i>B. tabaci</i>	130
5.3. Seasonal abundance of certain insect predators associated with piercing sucking insects infesting potato plants cultivated in newly reclaimed sandy areas at El-Khattara district, Sharkia Governorate, Egypt.	134
5.3.1. Chrysopids ( <i>Chrysoperla carnea</i> ).	134
5.3.2. <i>Coccinella septempunctata</i> .	135
5.3.3. <i>Coccinella undecimpunctata</i> .	137
5.3.4. <i>Metasyrphus corolla</i> .	139
5.3.5. <i>Coccinella 9 pinctata</i> .	140
6. Effect of temperature and relative humidity on the population densities of aphids and whitefly infesting potato plants and their predators.	141
7. Effect of chemical contents of potato leaves on the population density of insects infestation.	143
1. Effect of protein content.	143
1.1. Aphid insects.	143
1.2. Whitefly insects.	143

2. Effect of carbohydrate content.	144
2.1. Aphid insects.	144
2.2. Whitefly insects.	144
3. Effect of pH value.	144
3.1. Aphid insects.	145
3.2. Whitefly insects.	145
4. Effect of total phenol.	145
4.1. Aphid insects.	145
4.2. Whitefly insects.	146
<b>V- Discussion</b>	148
<b>VI- Summary</b>	157
<b>VII- References</b>	163
<b>Arabic summary</b>	201

## LIST OF TABLES

Table No.	Title	Page
(1)	The plants used for screening of their insecticidal activities against <i>Myzus persicae</i> and <i>Bemisia tabaci</i> .	59
(2)	GC/MS analysis of chemical constituents of <i>Rosmarinus officinalis</i> volatile oil.	69
(3)	GC/MS analysis of chemical constituents of <i>Ocimum basilicum</i> volatile oil	83
(4)	Free fatty acids and their relative percentage in <i>Ricinus communis</i> and <i>Nigella sativa</i> oil analysis by gas-liquid chromatography (GLC)	103
(5)	Identification the unsaponifiable matters of <i>Ricinus communis</i> and <i>Nigella sativa</i> oil analyzed by gas-liquid chromatography (GLC).	105
(6)	Toxicity of <i>Ocimum basilicum</i> and <i>Rosmarinus officinalis</i> volatile oils against adult of <i>Myzus persicae</i> .	106
(7)	Toxicity of <i>Ocimum basilicum</i> and <i>Rosmarinus officinalis</i> volatile oils against nymphs of <i>B. tabaci</i> .	108
(8)	Toxicity of <i>Ricinus communis</i> and <i>Nigella Sativa</i> fixed oils against adult of <i>Myzus persicae</i> .	110
(9)	Toxicity of <i>Ricinus communis</i> and <i>Nigella Sativa</i> fixed oils against nymphs of <i>B. tabaci</i> .	111
(10)	Toxicity of biozed aganist adult of <i>Myzus persicae</i> .	112
(11)	Toxicity of biozed aganist nymphs of <i>B. tabaci</i> .	113
(12)	Effect of tested treatments on mortality of adult <i>M. persicae</i> .	114
(13)	Effect of tested treatment at LC <sub>50</sub> on some biological aspects against adult of <i>Myzus persicae</i> .	117
(14)	Changes of total protein, total lipid and total carbohydrate levels in the adult of <i>M. persicae</i> treated with the tested treatments after 72 h.	122
(15)	Relative abundance of aphids & whitefly and the associated insect predators collected from potato plants during 2016 and 2017 seasons at El-Khattara district, Sharkia Governorate, Egypt.	128
(16)	Total mean numbers of aphids and whitefly infested potato cultivars during 2016 and 2017 seasons at El-Khattara district, Sharkia Governorate, Egypt.	130
(17)	Weekly total number of certain insect pests infesting different potato cultivars during winter plantation of 2016 at El-Khattara district, Sharkia Governorate, Egypt.1	132

(18)	Weekly total number of certain insect pests infesting different potato cultivars during winter plantation of 2017 at El-Khattara district, Sharkia Governorate, Egypt.	133
(19)	Total number of certain insect predators per sample (30 leaves / weekly) of different potato cultivars during winter plantation of 2016 at El-Khattara district, Sharkia Governorate , Egypt.	136
(20)	Total number of certain insect predators per sample (30 leaves / weekly) of different potato cultivars during winter plantation of 2017 at El-Khattara district, Sharkia Governorate, Egypt.	138
(21)	Simple correlation (r), partial regression (p) and explained variance (E.V.) between mean temperature and mean relative humidity and population density of aphid and whitefly infesting potato plants and their predators in El-khattara district during 2016 and 2017 seasons.	145
(22)	Effect of total proteins, chrbohydrate, PH values, phenol, calcium, maghnsium, phosphorus and Potassium percentage of potato cultivars on the population density of aphids and whitefly.	147

## LIST OF FIGURES

Figure No.	Title	Page
(1)	GC/MS chromatogram of <i>Rosmarinus officinalis</i> .	70
(2)	GC/MS chromatogram of <i>Ocimum basilicum</i> .	85
(3)	GLC analysis of saponifiable components (fatty acids) of <i>Ricinus communis</i> fixed oil.	104
(4)	GLC analysis of saponifiable components (fatty acids) of <i>Nigella saliva</i> fixed oil.	104
(5)	Log. Conc. Mortality regression lines of the plant volatile oils against adult of <i>Myzus persicae</i> .	107
(6)	Log. Conc. Mortality regression lines of the plant volatile oils against nymph of <i>B. tabaci</i> .	108
(7)	Log. Conc. Mortality regression lines of the plant fixed oils against adult of <i>Myzus persicae</i> .	110
(8)	Log. Conc. Mortality regression lines of the plant fixed oils against nymphs of <i>B. tabaci</i> .	111
(9)	Log. Conc. Mortality regression lines of biozed against <i>Myzus persicae</i> .	112
(10)	Log. Conc. Mortality regression lines of biozed against nymphs of <i>B. tabaci</i> .	113
(11)	Effect of different treatments against adult <i>M. persicae</i> at different periods (days).	115
(12)	Effect of LC <sub>50</sub> s concentrations of different treatments on longevity of adult <i>Myzus persicae</i> .	118
(13)	Effect of LC <sub>50</sub> s concentrations of different treatments on pre-parturition, parturition and post –parturition periods of adult of <i>Myzus persicae</i> .	119
(14)	Effect of LC <sub>50</sub> concentrations of different treatments on number of nymphs per adult of <i>Myzus persicae</i> .	120
(15)	Total protein levels in <i>M. persicae</i> treated with the tested treatments after 72h.	123
(16)	Changes % of total protein after 72h levels in <i>M. persicae</i> treated with the tested treatments from the untreated one after 72h.	123
(17)	Total lipid levels in <i>M. persicae</i> treated with the tested treatments after 72h.	124

<b>(18)</b>	Changes % of total lipid after 72h levels in <i>M. persicae</i> treated with the tested treatments from the untreated one after 72h.	<b>124</b>
<b>(19)</b>	Total carbohydrate levels in <i>M. persicae</i> treated with the tested treatments after 72h.	<b>125</b>
<b>(20)</b>	Changes % of total carbohydrates after 72h levels in <i>M. persicae</i> treated with the tested treatments from the untreated one after 72h.	<b>125</b>

### **List of plats**

1	Potato varieties and potato infestation by insects	56
2	Tested materials	58
