Faculty of Veterinary Medicine  
Department of Virology

## **Development of multiplex real time PCR assay for detection of some equine respiratory viruses**

**A Thesis Presented By**

**Shimaa Mousleh Sayed Ghoniem**

(B.V.Sc., Faculty of Veterinary Medicine, Cairo University, 2010)

**For the degree of Master in Veterinary Medical Science**

**(Virology)**

**Under supervision of**  
**Prof. Dr. Hussien Aly Hussien Ahmed**  
Professor of Virology  
Faculty of Veterinary Medicine  
Cairo University

**Dr. Ayman Hany El-Deeb**  
Assistant Professor of Virology  
Faculty of Veterinary Medicine  
Cairo University

**Prof. Dr. Mohamed Galal Aggour**  
Head of Research of Biotechnology  
and Ex Director of Animal Health  
Research Institute  
Agriculture Research Center

**(2017)**

## Approval Sheet

This is to approve that Thesis presented by

**Shimaa Mousleh Sayed Ghoniem**

For the degree of MV.Sc. (Virology) has been approved by the examining committee

**Prof. Dr. Hanafy Mahmoud Madbouly** Hanafy M. Madbouly  
Professor of Virology  
Faculty of Veterinary Medicine  
Bani sueif University

**Prof. Dr- Mohamed Abd El-Hamid Shalaby** Shalaby  
Professor of Virology  
Faculty of Veterinary Medicine  
Cairo University

**Prof. Dr- Mohamed Galal Aggour** H.C. Aggour  
Professor of Biotechnology  
Animal Health Research Institute  
Agriculture Research Center (Supervisor)

**Prof. Dr- Ayman Hany El- Deeb** Ayman G. - Deeb  
Assistant Professor of Virology  
Faculty of Veterinary Medicine  
Cairo University (Supervisor)

**Prof. Dr- Hussein Aly Hussein** Hussein Aly  
Professor of Virology  
Faculty of Veterinary Medicine  
Cairo University (Supervisor)

2017

Cairo University  
Faculty of Veterinary Medicine  
Department of Virology

## **SUPERVISION SHEET**

**Prof. Dr. Hussien Aly Hussien Ahmed**

Professor of Virology  
Faculty of Veterinary Medicine  
Cairo University

**Dr. Ayman Hany El-Deeb**

Assistant Professor of Virology  
Faculty of Veterinary Medicine  
Cairo University

**Prof. Dr. Mohamed Galal Aggour**

Head of Research of Biotechnology and  
Ex Director of Animal Health Research Institute  
Agriculture Research Center

## List of Contents

|   |          |
|---|----------|
| <b>1. Introduction .....</b>                                      | <b>1</b> |
| <b>2. Review of literature .....</b>                              | <b>6</b> |
| 2.1. Molecular diagnostic techniques for viral detection .....    | 6        |
| 2.1.1. Restriction fragment length polymorphism .....             | 6        |
| 2.1.2. Non amplified nucleic acid probes .....                    | 8        |
| 2.1.2.1. Liquid phase hybridization .....                         | 8        |
| 2.1.2.2. Solid phase hybridization .....                          | 8        |
| 2.1.2.3. In situ hybridization .....                              | 8        |
| 2.1.3. Amplified Nucleic Acid Techniques .....                    | 9        |
| 2.1.3.1. Signal Amplification Techniques .....                    | 9        |
| 2.1.3.1.1. bDNA Assay .....                                       | 9        |
| 2.1.3.1.2. Hybrid Capture Assay .....                             | 9        |
| 2.1.3.2. Target Amplification Techniques.....                     | 10       |
| 2.1.3.2.1. PCR Techniques .....                                   | 10       |
| 2.1.3.2.1.1. Conventional PCR .....                               | 10       |
| 2.1.3.2.1.2. Reverse Transcriptase-PCR.....                       | 11       |
| 2.1.3.2.1.3. Nested-PCR .....                                     | 11       |
| 2.1.3.2.1.4. Multiplex PCR .....                                  | 11       |
| 2.1.3.2.1.4.1. Optimization and validation of multiplex PCR ..... | 11       |
| 2.1.3.2.1.5. Real-time PCR .....                                  | 15       |
| 2.1.3.2.1.5.1. Detection formats in real time PCR .....           | 16       |
| 2.1.3.2.1.5.1.1. Intercalating dye .....                          | 16       |
| 2.1.3.2.1.5.1.2. Fluorophore-labelled oligonucleotides.....       | 17       |
| 2.1.3.2.1.5.1.2.1. Hybridization probe .....                      | 18       |

|   |    |
|---|----|
| 2.1.3.2.1.5.1.2.2. TaqMan probe .....                           | 19 |
| 2.1.3.2.1.5.1.2.3. Minor Groove binding probe .....             | 20 |
| 2.1.3.2.1.5.1.2.4. Locked nucleic acid probe .....              | 21 |
| 2.1.3.2.1.5.1.2.5. Molecular beacons .....                      | 22 |
| 2.1.3.2.1.5.1.2.6. Scorpion primer .....                        | 23 |

| 2.2.1.4. Molecular diagnosis of Equine herpesvirus type1 and 4 .....                       | 45        |
| 2.2.2. Equine influenza virus .....  | 50        |
| 2.2.2.1. History of Equine influenza virus .....   | 50        |
| 2.2.2.2. Classification of Equine influenza virus .....                                    | 52        |
| 2.2.2.3. Genome organization of Equine influenza virus .....                               | 53        |
| 2.2.2.4. Molecular diagnosis of Equine influenza virus .....                               | 61        |
| <b>3. Materials and Methods .....</b>  | <b>65</b> |
| 3.1. Extraction of nucleic acids from EHV-1, EHV-4 and EIV isolates .....                  | 66        |
| 3.2. Development of multiplex assay for EHV-1, EHV-4 and EIV ....                          | 69        |
| 3.3. Evaluation of the specificity of the primers and probes .....                         | 73        |
| 3.3.1. Evaluation of the specificity of the primers and probes in monoplex forms .....     | 73        |
| 3.3.1.1. Evaluation of the specificity of EHV-1 primers and probe in monoplex form .....   | 73        |
| 3.3.1.2. Evaluation of the specificity of EHV-4 primers and probes in monoplex form .....  | 75        |
| 3.3.1.3. Evaluation of the specificity of EIV primers and probes in monoplex form .....    | 75        |
| 3.3.2. Evaluation of the specificity of the primers and probes in multiplex forms .....    | 77        |
| 3.3.2.1. Evaluation of the specificity of EHV-1 primers and probes in multiplex form ..... | 77        |

|  |    |
|--|----|
| 3.3.2.2. Evaluation of the specificity of EHV-4 primers and probes in multiplex form .....                       | 77 |
| 3.3.2.3. Evaluation of the specificity of EIV primers and probes in multiplex form .....                         | 78 |
| 3.3.3. Evaluation of the specificity of the utilized primers and probes using of <i>Streptococcus equi</i> ..... | 78 |
| 3.3.4. Detection of both EHV-1 and EHV-4 DNA in mixed reaction   | 79 |
| 3.4. Evaluation of the analytical sensitivity of the developed multiplex assay .....                             | 81 |
| 3.4.1. Quantification of the nucleic acids of isolates .....   | 81 |
| 3.4.1.1. Amplification of the DNA and cDNA fragments using conventional PCR and RT-PCR .....                     | 81 |
| 3.4.1.2. Analysis of the amplified products by agarose Gel Electrophoresis .....                                 | 83 |
| 3.4.1.3. Purification of the gel Bands containing the PCR product ....   | 85 |
| 3.4.1.4. Determination of the DNA Concentration .....  | 86 |
| 3.4.1.5. Calculation of the number of copies of Nucleic acid molecules .....                                     | 89 |
| 3.4.2. Evaluation of the analytical sensitivity of the monoplex forms  | 90 |
| 3.4.2.1. Evaluation of the analytical sensitivity of monoplex form for EHV-1.....                                | 90 |
| 3.4.2.2. Evaluation of the analytical sensitivity of monoplex form for EHV-4.....                                | 91 |
| 3.4.2.3. Evaluation of the analytical sensitivity of monoplex form for EIV .....                                 | 91 |
| 3.4.3. Evaluation of the analytical sensitivity of the multiplex forms   | 92 |
| 3.4.3.1. Evaluation of the analytical sensitivity of multiplex form for EHV-1.....                               | 92 |

|   |            |
|---|------------|
| 3.4.3.2. Evaluation of the analytical sensitivity of multiplex form for EHV-4.....  | 93         |
| 3.4.3.3. Evaluation of the analytical sensitivity of multiplex form for EIV.....  | 93         |
| 3.5. Evaluation of the assay performance on clinical samples .....  | 94         |
| 3.5.1. Analysis the clinical samples using the developed multiplex assay .....  | 94         |
| 3.5.2. Comparison study by commercial monoplex rPCR and rRT-PCR diagnostic kits .....                                     | 96         |
| 3.5.2.1. Analysis of clinical samples by EHV-1 rPCR commercial diagnostic kit.....  | 96         |
| 3.5.2.2. Analysis of clinical samples by EHV-4 rPCR commercial diagnostic kit.....  | 99         |
| 3.5.2.3. Analysis of clinical samples by EIV rRT-PCR commercial diagnostic kit.....                                       | 100        |
| <b>4. Results.....</b>  | <b>103</b> |
| 4.1. Evaluation of the specificity of the primers and probes .....  | 103        |
| 4.1.1. Evaluation of the specificity of primers and probes in monoplex and multiplex forms for EHV-1, EHV-4 and EIV ..... | 103        |
| 4.1.2. Evaluation of the specificity of the utilized primers and probes using of <i>Streptococcus equi</i> .....          | 107        |
| 4.1.3. Detection of both EHV-1 and EHV-4 DNA in mixed reaction .....  | 108        |
| 4.2. Evaluation of the analytical sensitivity of the developed multiplex assay .....                                      | 109        |
| 4.2.1. Quantification of the nucleic acids of isolates .....  | 109        |
| 4.2.2. Evaluation of the analytical sensitivity of the monoplex and multiplex forms for EHV-1, EHV-4 and EIV .....        | 110        |

|   |            |
|---|------------|
| 4.3. Evaluation of the assay performance on clinical samples .....                    | 116        |
| 4.4.1. Comparison study by commercial monoplex rPCR and rRT-PCR diagnostic kits ..... | 119        |
| <b>5. Discussion .....</b>  | <b>120</b> |
| <b>6. Summary .....</b>   | <b>128</b> |

## List of Abbreviation

|            |  |
|------------|--|
| Amino-LNA  | Amino-methylene Locked nucleic acid    |
| ANT3       | Adenine nucleotide translocator 3      |
| bDNA assay | Branched DNA assay                     |
| BHK        | Baby Hamster Kidney                    |
| BHQ        | Black hole quencher                    |
| CAM        | Chorioallantoic membrane               |
| cDNA       | Complementary Deoxyribonucleic acid    |
| Ct         | Cycle threshold                        |
| Cy3        | Carbocyanin 3                          |
| Cy5        | Carbocyanin 5                          |
| DDW        | Deionized double distilled water       |
| DFA        | Directigen Flu A                       |
| DNA        | Deoxyribonucleic acid                  |
| dNTPs      | Nucleotides                            |
| dsDNA      | Double stranded deoxyribonucleic acid  |
| DSe        | Diagnostic sensitivity                 |
| EAdV1      | Equine adenovirus 1                    |
| EAV        | Equine arteritis virus                 |
| ECE        | Embryonated Chicken Eggs               |
| EDTA       | Ethelamine Diamine tetra acetic acid   |
| EHV        | Equine herpesvirus                     |
| EIV        | Equine influenza virus                 |
| ELISA      | Enzyme-linked immunosorbent assay      |
| ERAV       | Equine rhinitis virus A                |
| ERBV       | Equine rhinitis virus B                |
| ERV        | Equine rhinopneumonitis virus          |
| EtBr       | Ethidium bromide                       |
| FAM        | 6-carboxy-Fluorescein                  |
| FEN-1      | Flap structure specific endonuclease-1 |
| FRET       | Fluorescence resonance energy transfer |
| g          | Glycoprotein                           |
| HA         | Hemagglutinin                          |
| HDA        | Helicase-dependent amplification       |
| HEX        | Hexachloro-6-carboxy-fluorescein       |
| HI         | Hemagglutination inhibition            |

|           |  |
|-----------|--|
| HSV       | Herpes simplex virus   |
| ICN       | Crude gamma $^{32}$ ATP  |
| iiPCR     | Insulated isothermal polymerase chain reaction                       |
| IR        | Internal repeat  |
| iiRT-PCR  | Insulated isothermal reverse transcription polymerase chain reaction |
| JOE       | 2,7-Dimethoxy-4,5-dichloro-6-carboxyfluorescein                      |
| LAMP      | Loop Mediated Isothermal Amplification                               |
| LNA       | Locked nucleic acid  |
| LUX       | Light Upon eXtention   |
| M         | Matrix protein   |
| MGB       | Minor groove binder  |
| mRNA      | Messenger ribonucleic acid   |
| NA        | Neuraminidase  |
| NASBA     | Nucleic acid sequence-based amplification                            |
| NEP       | Nuclear export protein   |
| NP        | Nucleo-protein   |
| NS        | Non-structural   |
| ORFs      | Open reading frames  |
| Oxy-LNA   | O-methylene Locked nucleic acid                                      |
| PA        | Polymerase acidic  |
| PB1       | Polymerase basic1  |
| PB2       | Polymerase basic2  |
| PCR       | Polymerase chain reaction  |
| RdRp      | RNA dependent RNA polymerase   |
| RCA       | Rolling circle amplification   |
| REA       | Restriction enzyme analysis  |
| RFLPs     | Restriction fragment length polymorphisms                            |
| RNA       | Ribonucleic acid   |
| RNP       | Ribonucleoprotein  |
| ROX       | 6-carboxy-X-Rhodamin   |
| RPA       | Recombinase polymerase amplification                                 |
| rPCR      | Real time polymerase chain reaction                                  |
| rRT-PCR   | Real time reverse transcription polymerase chain reaction            |
| Rsq value | R-squared value  |
| RT-PCR    | Reverse transcription polymerase chain reaction                      |
| rTth      | Recombinant thermostable DNA polymerase                              |

|                |                                      |
|----------------|--------------------------------------|
| SARS           | Severe acute respiratory syndrome    |
| S.equi         | Streptococcus equi                   |
| SNPs           | Single-nucleotide polymorphisms      |
| TAE            | Tris acetic acid EDTA                |
| TAMRA          | 6-carboxy-tetramethyl-rhodamine      |
| TET            | Tetrachloro-6-carboxy-fluorescein    |
| Texas Red      | Sulforhodamine-101-acid-chloride     |
| Thio-LNA       | Smethylene Locked nucleic acid       |
| TK             | Thymidine kinase                     |
| Tm             | Melting temperature                  |
| TMA            | Transcription mediated amplification |
| TR             | Terminal repeat                      |
| U <sub>L</sub> | Long unique region                   |
| U <sub>S</sub> | Short unique region                  |
| VDAC-1         | Voltage-dependent anion channel 1    |
| VI             | Virus isolation                      |
| vRNA           | Viral ribonucleic acid               |
| vRNPs          | Viral ribonucleic protein            |

|                       |  |

### **Abstract**

Viral respiratory diseases are frequently reported in equine species affecting equine industry and cause huge economic losses. In the present study, we developed a multiplex assay for the simultaneous detection of the main viruses that cause respiratory diseases in equine species, Equine herpesvirus type 1(EHV-1) and 4 (EHV-4) and Equine influenza virus (EIV). The primers and probes amplified only the targeted viruses and there were no inter-assay cross amplifications or non-specific interactions. The multiplex assay efficiencies were 92.5%, 97% and 90% and the monoplex efficiencies were 97.4%, 98.2% and 90.7% for EHV-1, EHV-4 and EIV, respectively. The R square values (Rsq) in both forms were greater than 0.990. The performance of the assay was evaluated by analysing 152 different clinical samples from clinically infected horses. EHV-1 DNA was detected as the single causative agent in 12 samples, EHV-4 DNA in 9 samples and both EHV-1 and EHV-4 were detected in 4 samples. EIV RNA was not detected during this study. The accuracy of the assay was confirmed by comparing these results with those obtained from analysing the same samples using commercial rPCR and rRT- PCR diagnostic kits. This multiplex assay is proven to be a sensitive, specific, accurate and cost-effective method for the detection of the target viruses whether they occur as a single agent or as a part of co-infections.

**Key words:** Multiplex real-time PCR, Equine, Respiratory diseases.
