Name of Candidate: Maryham Adel Rezk Sawers

Degree: M.Sc.

Title of Thesis: Spiders Incidence In Parks At Cairo And Giza Governorates

Supervisors: Dr. Morad Fahmy Hassan

Dr. Shahira Mohamad Onsy El-Bishlawy

Dr. Gihan Mohamed El Sayed Sallam

Department: Zoology and Agricultural Nematology

Branch: Agricultural Zoology

Approval: / /

ABSTRACT

Incidence research conducted to give a broad scope of the Egyptian spiders' fauna. This study considered as the real seasonal study of spiders' population inhabiting the ornamental plants in four public parks in two governorates; Zohria and Horreya (Cairo Governorate), Orman and the Zoo (Giza Governorate). 20 plants were examined monthly (five plants were chosen from each park) to evaluate the spider population on each plant. The study was carried out during March 2013 to February 2014. Temperature degrees and Relative Humidity were reported depending on the data from the Central Laboratory for Agriculture Climate (CLAC), A. R. C.. Collecting methods were beating net (branch shaking) and hand sorting. All the collected specimens transferred to the laboratory for counting and identification. Results revealed that the total number of the spider population were 4,184 individuals during the study, from them, 21 families, 31 genera and 24 species were identified. The largest number of spiders species were belonging to the following families: Salticidae, Gnaphosidae, Theridiidae and Oonopidae. Generally, Zohria Park showed a high population of spiders especially in spring, followed by Orman Park. Biological studies on the common spider species, *Theridion melanostictum* Cambridge, 1876 (family: Theridiidae) was carried out in an incubator $25\pm 1^{\circ}\text{C}$ and 60-70% R.H.. The movable stages of two-spotted spider mite *Tetranychus urticae*, the adult of fruit fly, *Drosophila melanogaster* and the 1st, 2nd and 3rd instars larvae of cotton leaf worm *Spodoptera littoralis* were used as prey. The incubation period averaged 13.3 ± 1.9 and 15.0 ± 2.0 days when fed on *T. urticae* & *D. melanogaster* and *S. littoralis*, respectively. Male lived shorter than female. , longevity averaged 25.2 ± 1.2 & 48.0 ± 1.0 and 25.2 ± 1.4 & 47.9 ± 1.2 days when fed on the adult of the fruit fly *D. melanogaster* and the third instar of *S. littoralis*, for male and female, respectively. Also, results indicate that keeping egg sacs in low temperature elongate the incubation period.

Key words: Incidence, Spiders, Zohria, Horrey, Orman, the Zoo Park, Ornamental plants, Cairo, Giza Governorates, *Theridion melanostictum*, Theridiidae, Biological studies.

LIST OF TABLES

No.	Title	Page
1.	Common and scientific names of the ornamental plants in four parks	33
2.	The spider species collected from five ornamental plants in four parks belong to Cairo and Giza Governorates	42
3.	Total number of spiders associated with five ornamental plants at Zohria Park, Cairo Governorate in spring at 20.7°C and 58.9% R.H.	47
4.	Total number of spiders associated with five ornamental plants at Zohria Park, Cairo Governorate in summer at 27.0°C and 62.9% R.H.	50
5.	Total number of spiders associated with five ornamental plants at Zohria Park, Cairo Governorate in autumn at 22.1°C and 66.3% R.H.	53
6.	Total number of spiders associated with five ornamental plants at Zohria Park, Cairo Governorate in winter at 12.9°C and 63.0% R.H.	57
7.	Total number of spiders associated with five ornamental plants at Horreya Park, Cairo Governorate in spring at 20.7°C and 58.9% R.H.	62
8.	Total number of spiders associated with five ornamental plants at Horreya Park, Cairo Governorate in summer at 27.0°C and 62.9% R.H.	64
9.	Total number of spiders associated with five ornamental plants at Horreya Park, Cairo Governorate in autumn at 22.1°C and 66.3% R.H.	66

10. Total number of spiders associated with five ornamental plants at Horreya Park, Cairo Governorate in winter at 12.9°C and 63.0% R.H.	69
11. Total number of spiders associated with five ornamental plants at Orman Park, Giza Governorate in spring at 20.0°C and 53.0% R.H.	73
12. Total number of spiders associated with five ornamental plants at Orman Park, Giza Governorate in summer at 27.8°C and 56.6% R.H.	76
13. Total number of spiders associated with five ornamental plants at Orman Park, Giza Governorate in autumn at 24.3°C and 57.6% R.H.	79
14. Total number of spiders associated with five ornamental plants at Orman Park, Giza Governorate in winter at 12.9°C and 63.0% R.H.	83
15. Total number of spiders associated with five ornamental plants at the Zoo Park, Giza Governorate in spring at 20.0°C and 53.0% R.H.	87
16. Total number of spiders associated with five ornamental plants at the Zoo Park, Giza Governorate in summer at 27.8°C and 56.6% R.H.	90
17. Total number of spiders associated with five ornamental plants at the Zoo Park, Giza Governorate in autumn at 24.3°C and 57.6% R.H.	95
18. Total number of spiders associated with five ornamental plants at the Zoo Park, Giza Governorate in winter at 12.9°C and 63.0% R.H.	98
19. Total number of spiders in Zohria and Horreya Parks, Cairo Governorate during four seasons.....	103

20.	Total number of spiders in Orman and the Zoo Parks, Giza Governorate during four seasons.....	107
21.	Total number of spiders in four parks, Cairo and Giza Governorates during four seasons	109
22.	Female fecundity of the spider species, <i>Theridion melanostictum</i> Cambrige 1876, feeding on <i>Tetranychus urticae</i> and <i>Drosophila melanogaster</i> or <i>Spodoptera littoralis</i> at 25±1°C and 60-70% R.H.	117
23.	Life cycle of the spider species, <i>Theridion melanostictum</i> Cambrige 1876 in Egypt when fed on <i>Tetranychus urticae</i> and <i>Drosophila melanogaster</i> at 25±1°C and 60-70% R.H.	119
24.	Life cycle of the spider species, <i>Theridion melanostictum</i> Cambrige 1879 in Egypt when fed on <i>Spodoptera littoralis</i> at 25±1°C and 60-70% R.H.	120
25.	Food consumption of the spider species, <i>Theridion melanostictum</i> Cambrige 1879 in Egypt when fed on <i>Tetranychus urticae</i> and <i>Drosophila melanogaster</i> at 25±1°C and 60-70% R.H.....	124
26.	Food consumption of the spider species, <i>Theridion melanostictum</i> Cambrige 1879 in Egypt when fed on <i>Spodoptera littoralis</i> at 25±1°C and 60-70% R.H.....	125
