

Universitat Autònoma de Barcelona

**Nanoparticle-based sensors for pathogen nucleic acid
detection with interest for agriculture**

Mohga Wagdy Yehia Mohamed Khater

Thesis dissertation to apply for the PhD in Biotechnology

Department of Chemical, Biological and Environmental Engineering

Autonomous University of Barcelona

PhD Director

Prof. Arben Merkoçi Hyka

ICREA& Nanobioelectronics and Biosensors Group

Institut Catala de Nanociencia i Nanotecnologia (ICN2)

2019

Table of Contents

Preface	1
Chapter 1 – Introduction	5
Antibody-based Biosensors	14
Electrochemical Immunosensors	14
<i>Voltammetric detection based on the use of enzymes</i>	14
<i>Label-free electrochemical impedance spectroscopy (EIS)-based detection</i>	17
<i>Label-free quartz crystal microbalance-based approaches</i>	18
Optical Immunosensors	19
<i>Lateral flow immunoassays (LFIA)s</i>	19
<i>Fluorescent approaches</i>	21
<i>Surface plasmon resonance (SPR) systems</i>	23
DNA-Based Biosensors	24
Electrochemical DNA Biosensors	24
<i>Label-free DNA hybridization voltammetric detection</i>	24
<i>Nanochannels as emerging tools for electrochemical DNA analysis</i>	26
Optical DNA Sensors	29
<i>Lateral flow assays based on AuNPs</i>	29
<i>AuNPs aggregation-based DNA analysis and related approaches</i>	31

<i>Fluorescent and colorimetric approaches</i>	33
<i>Electrochemiluminescence-based DNA detection</i>	34
<i>Nanochannel arrays as emerging platforms for DNA analysis</i>	35
Commercial Available Devices	36
Conclusions	38
References	40
Chapter 2 – Objectives	54
Chapter 3 – Impedance Detection of Plant Virus	58
Electrochemical detection of plant virus using gold nanoparticle-modified electrodes	60
Characterization of AuNP-Modified SPCE.....	63
DNA Hybridization Biosensor Optimization	67
Citrus tristeza-Related Nucleic Acid Detection	70
Selectivity and reproducibility studies	71
Conclusion	74
References	76
Chapter 4 – In situ Detection of Amplified Virus Nucleic Acid	82
In situ plant virus nucleic acid isothermal amplification detection on gold nanoparticle-modified electrodes	84
Design of RPA for CTV Detection Assay	86
Electrochemical Characterization	89
Optimization of In Situ Isothermal RPA on Electrode Surface	89
In situ Citrus tristeza-related Nucleic Acid DNA Amplification/Detection	91
Conclusion	95
References	96
Chapter 5 – Plant Virus Nucleic Acid Paper Sensor	100
Highly Sensitive Direct Detection of Plant Virus Nucleic Acid Amplification on Gold Nanoparticle Based Paper Sensor	102

Nucleic Acid Diagnostic Methods.....	102
Nucleic Acid Lateral Flow Immunoassays.....	102
Gold Nanoparticle-Bioconjugate for Isothermal RPA-LF Test	104
Isothermal RPA-LF Optimization	105
Isothermal RPA-LF for CTV Detection.....	110
Interference Studies	113
Conclusion	113
References	114
Annex I – Experimental Section	118
Annex II – Supporting Information	134
Annex III – List of Abbreviations	146
Annex IV– Scientific Publications	150
