Effect of Bacterial Proteolytic enzymes on Virulence and Pathogenicity of Avian Influenza Virus

A Thesis Presented By
Sherein Galal Mohamed Khoulosy
(M.V.Sc, Cairo University)

For PhD Degree in Veterinary Medical Sciences, Microbiology
(Bacteriology, Immunology and Mycology)

Under the Supervision of

Prof. Dr. Salah El-Dein Abdel Kareim Selim
Professor of Microbiology
Faculty of Veterinary Medicine
Cairo University

Prof. Dr. Ahmed S. Shehata
Professor of Microbiology Faculty
of Veterinary Medicine
Cairo University

Prof. Dr. Soad A.A. Abdel Wanis
Chief Researcher of Poultry Diseases
Animal Health Research Institute

2019

Cairo University

Name: Sherein Galal Mohamed Khoulosy

Degree: PhD Degree in Veterinary Medical Sciences, Microbiology (Bacteriology, Immunology and Mycology)

Title of Thesis : Effect of Bacterial Proteolytic enzymes on Virulence and Pathogenicity of Avian Influenza Virus

Supervisors :

Prof. Dr. Salah El-Dein Abdel Kareim Selim , Professor of Microbiology, Dept. of Microbiology, Faculty of Veterinary Medicine, Cairo University

Prof. Dr. Ahmed Samir Shehata

Professor of Microbiology, Faculty of Veterinary Medicine , Cairo University

Prof. Dr. Soad Abdel Aziz Abdel Wanis

Chief Researcher of Poultry Diseases, Animal Health research Institute

Abstract

Two thousands cloacal swabs were collected from 100 poultry farms showing respiratory and diarrheic sings. All samples were examined bacteriologically for isolation of *E.coli* & *Salmonella*. The results revealed detection of *Salmonella* in 31 farms out of 100 examined farms with percentage 31%. Isolation of *E.coli* was carried out and the results revealed isolation of *E.coli* from 67 farms with percentage 67% of examined 100 poultry farms. Detection of the proteolytic enzymes produced by bacterial isolates was done using Protease Agar Casein Assay. All collected samples were examined for detection of Avian Influenza viruses using RRT-PCR. HPAI (H5N1) virus was detected in 10 farms while LPAI (H9N2) was detected in 31 farms out of 100 examined farms. Effect of co-infection with HPAI & LPAI and proteolytic bacteria (*Salmonella Enteritidis* and *E.coli* O158) was carried out in SPF chicken. Morbidity and mortality were recorded as well as re-isolation and virus shedding were done

List of Contents

Title	Page
1- Introduction	1-6
2-Review of literature	7-47
2-2 Viral –Bacterial association infections	7
2-3 Incidence of <i>Salmonella</i> species in poultry farms	14
2-4 Incidence of <i>E.coli</i> species in poultry farms	27
2-4 Detection of the proteolytic enzymes produced by bacterial isolates using Protease Agar Casein Assay	34
2-5 Incidence of Avian Influenza viruses in poultry farms	37
2-6 Cytopathic effect of LPAI virus in cell culture in the presence of bacterial protease	45
3- Material and Methods	48-99
3-1 Material	48
3-1-1 Samples	48
3-1-2 Media used for isolation of <i>Salmonella</i> spp.	49
3.1.3. Media used for biochemical identification of <i>Salmonella</i> spp.	50
3.1.4. Chemicals and reagents used for biochemical identification of <i>Salmonellae</i> .	51
3.1.5. Stain used	51
3.1.6. Diagnostic antisera	51
3.1.7. Equipment used for the isolation, identification and detection of <i>Salmonella</i>	51
3-1-8 Materials used for PCR technique	52
3-1-9 Equipment and apparatus used for PCR Technique	56
3-1-10 Standard bacterial strains	57
3-1-11. Media used for isolation of <i>E.coli</i> spp.	57
3-1-12. Media used for biochemical identification of <i>E.coli</i>	58
3-1-13. Diagnostic antisera	59
3-1-14. Materials and equipment used for PCR amplification of <i>E.coli</i> isolates	60
3-1-15 Media used for detection of the proteolytic enzymes produced by bacterial isolates	65
3-1-16 Material used for detection of Avian Influenza virus by Real Time PCR	66
3-1-17. Cytopathic effect of Low Pathogenic Avian influenza in cell culture in the presence of bacterial proteolytic enzymes	70

Title	Page
3-1-18. Materials used to study the effect of proteolytic bacteria on pathogenicity of AI viruses (H5N1 & H9N2)	72
3-2 Methods	74-99
3-2-1 Handling and preparation of collected cloacal swabs for isolation of <i>Salmonella</i> Spp.	74
3-2-2 Procedure for detection of <i>Salmonella</i> spp.	74
3-2-3 Selection of colonies for confirmation of <i>Salmonella</i>	75
3-2-4 Microscopic identification of <i>Salmonella</i>	75
3-2-5 Biochemical identification of <i>Salmonella</i> spp.	76
3-2-6 Serotyping of <i>Salmonella</i> spp.	76
3-2-7 Polymerase Chain Reaction (PCR) for detection of <i>Salmonella</i>	78
3-2-8 Isolation and identification of <i>E.coli</i>	82
3-2-8-1. Procedure for detection of <i>E.coli</i>	82
3.2.8.2. Microscopical examination	83
3.2.8.3. Biochemical identification of <i>E.coli</i> isolates:	83
3.2.8.4. Serotyping of <i>E.coli</i> isolates	85
3.2.8.5 Polymerase Chain Reaction (PCR) for <i>E.coli</i> identification	86
3-2-9 Protease Agar Casein Assay used for detection of the proteolytic enzymes produced by bacterial isolates	89
3-2-10 Method used for detection of Avian Influenza virus by REAL TIME PCR	90
3-2-11. Cytopathic effect of Low Pathogenic Avian influenza in cell culture in the presence of bacterial proteolytic enzymes	95
3-2-12. Procedures for experimental infection of chicken to study the effect of proteolytic bacteria on pathogenicity of AI viruses (H5N1 & H9N2)	97
4- Results	100-127
5- Discussion	128-144
6- Summary	145-147
7- Conclusion	148
