Abstract

Title of the thesis: Analytical Studies on Some Types of Adulteration and Contaminants in Honey Floral.

Name of the candidate: Mohamed El-Sayed Ismail Abd El-Hay

Degree: M.Sc. Faculty of Science, Cairo University.

Honey consumption has increased over the last few years, it is a natural product composed of sugars, amino acids, enzymes, organic acids, vitamins, carotenoids, minerals, and aromatic substances.

The determination methods of main honey sugars by Ion Chromatography with a pulsed amperometric detector (IC-PAD) and hydroxymethylfurfural (HMF) by HPLC have been adopted and fully validated. The limits of detection (LOD) and limits of quantification (LOQ) were calculated. Accuracy, precision, and uncertainty were estimated for the two methods. Screening the contamination of heavy metals has been applied using ICP-OES.

All laboring methods are internationally accredited by FINAS for fulfilling the requirements of ISO/IEC 17025/2017 standard.

The methods have been applied to the screening of 55 real honey samples from local markets; the resulting data has been employed for estimation of the relation between honey composition and quality parameters.

Keywords: (IC-PAD); hydroxymethylfurfural; HPLC; LOD; LOQ; ICP-OES.

Supervisors: Prof. Dr. Faten A. Nour El-Dien

Prof. Dr. Ahmed Mamdouh I. Gomaa

Ass. Prof. Marwa Elbadry Mohamed

Contents

Chapter one	1
Introduction.....	1
1.1. Honey Sugars	1
1.1.1. Chemical and physical properties of honey	1
1.1.2. Legislation and regulations	2
1.1.3. Food adulteration	4
1.1.4. Honey adulteration.....	5
1.1.5. Adulteration types and common adulterants in honey	7
1.2. Hydroxymethylfurfural (HMF).....	11
1.2.1. Toxicity of HMF.....	13
1.2.2. HMF Regulations and legislations.....	13
1.3. Honey contaminants.....	13
1.4. Analytical studies and determination of honey:.....	16
1.4.1. Calorimetric methods (Application of DSC)	16
1.4.2. Stable Carbon Isotope Ratio Analysis (SCIRA)	18
1.4.3. Gas Chromatography (GC) analysis	19
1.4.4. Near-Infrared Transflectance Spectroscopy (NIR)	20
1.4.5. UV-Visible spectrophotometer	22
1.4.6. High-performance thin-layer chromatographic (HPTLC)	23
1.4.7. Liquid Chromatography (LC) analysis	25
1.4.8. Heavy metals content and detection techniques	33
1.4.9. Why choosing sucrose as an indication of adulteration in Egypt?	35
Chapter two	36
Experimental	36
2.1. Reagents, Chemicals, and Standards	36
2.2. Reference standard solutions preparation	36
2.2.1. Stock solution.....	36

2.2.2. Intermediate standard solutions	37
2.2.3. Working solution	38
2.2.4. Calibration solution.....	38
2.3. Equipment and tools	39
2.3.1. Normal Lab Apparatus.....	39
2.3.2. Ion chromatography equipment (Metrohm).....	40
2.3.3. HPLC equipment	41
2.3.4. Inductively coupled plasma optical emission spectrometry (ICP-OES)	
41	
2.3.5. Milestone High-Pressure Microwave (Model: Ethos Up).	42
2.4. Procedure	42
2.4.1. Analysis of honey sugars and HMF	42
2.4.2. Analysis of heavy metals	43
2.5. Calculations.....	45
2.5.1. Honey sugars calculations.....	45
2.5.2. HMF calculations.....	45
2.5.3. Determination of heavy metals	46
2.6. Sampling	48
Chapter three	49
Results and discussion	49
3.1. Ion chromatography and HPLC for determination of Glucose, Fructose, Sucrose, Maltose and HMF in Honey	49
3.1.1. Method development and adaptation	49
3.2. Method validation	57
3.2.1. Method sensetivity	57
3.2.2. Method Recoveries	60
3.2.3. Linearity and working range	61
3.2.4. Method Accuracy	65

3.2.5. Method Trueness.....	66
3.3. Screening for some local market honey samples	73
3.3.1. Adulterated, Authentic, and Authentic with low quality sample.....	80
3.3.2. Glucose and Fructose.....	80
3.3.3. Sucrose	80
3.3.4. HMF 81	
3.3.5. Heavy Metals	83
3.3.6. The Unconformity.....	84
3.4. Conclusion	86
Summary	87
References.....	90
Arabic summary	1
