ABSTRACT

Egypt is the largest producer of citrus crops and also, conside red the largest exporter of orange in the world. The phytophagous mites and scale insects are the most important obstacles serious to citrus. The presented of work aimed to study the survey, incidence and population dynamics of mite and insect species associated with leaves and fruits of two citrus varieties at Tukh and Qalub district during two successive years. The obtained results indicated that, Twelve insect pest species from eight families were recorded on two citrus varieties. In addition, the survey studies recorded 29 species of mites were divided according their feeding behavior into three groups, Phytophagous mites, Predacious insects & mites Miscellaneous mites. The population density of predacious mites was correlated positively with the population density of Panonychus citri (McGregor); and Chrysomphalus aonidum (L.); at Tukh and Qalub districts during two successive years on navel and balady orange. The population dynamics of adult females of purple scale insect, Lepidosaphes beckii (Newman); on leaves of two citrus varieties, navel and balady orange at Tukh districts during two successive years . The predatory mite, Neoseiulus californicus (McGregor); was active for controlling the citrus red mite, Panonychus citri (McGregor); on seedlings of navel orange in open field was still active on P. citri until three months from the second release and giving a good result, so it can be successfully use as biocontrol agent in controlling P. citri on citrus trees.

CONTENTS

Title	Page
I-INTRODUCTION	1
II-REVIEW OF LITERATURE	3
1- Survey and incidence of insect and mite species associated with leaves and fruits of citrus varieties.	3
 2- Population dynamics of black scale insect <i>Chrysomphalus</i> aonidum (L.) and purple scale insect, <i>Lepidosaphes beckii</i> (Newman) on citrus trees. 	6
3- Population dynamics of citrus red mite, <i>Panonychus citri</i> (McGregor).	10
 4-Survey and incidence of population dynamics of predacious insect and mite species associated with <i>C. aonidum</i>, (L.) <i>L. beckii</i> (Newman) and <i>P. citri</i> (McGregor) on citrus trees. 	13
5- Release of predacious mite, <i>Neoseiulus californicus</i> (McGregor) to control of scale insects, citrus red mite, and <i>P. citri</i> (McGregor) on citrus trees.	17
III-MATERIALS AND METHODS	20
1- Survey and incidence of mites and insects occurring on two citrus varieties navel orange & balady orange at Tukh and Qalub from Qalubia Governorate during two successive years.	20
 2- Population dynamics of purple scale insect, <i>Lepidosaphes beckii</i>, (Newman) black scael insect <i>Chrysomphalus aonidum</i> (L.) and citrus red mite, <i>Panonychus citri</i>, (McGregor) and predacious mites on two citrus varieties navel orange & balady orange at two districts, Qalubia Governorate. 	21

3- Release of predatory mite, <i>Neoseiulus californicus</i> (McGregor) on seedlings of balady orange to control the citrus red mite <i>Panonychus citri</i> , (McGregor).	22
IV-RESULTS AND DISCUSSION	23
Ecological studies	23
1-Survey and incidence of insects and mites occurring on citrus varieties at Qalubia Governorate.	23
1.1-Survey and incidenc of insect pests.	23
1.2-Survey and incidenc of Phytophagous mites .	27
1.3-Survey and incidenc of Predacious insects .	30
1.4-Survey and incidenc of Predacious mites .	30
1.5-Survey and incidenc miscellaneous mites .	34
2-Population dynamics of adults of citrus black insect, <i>Chrysomphalus aonidum</i> (L.) the purple scale insect, <i>Lepidosaphes beckii</i> , (Newman) citrus red mite, <i>Panonychus citri</i> (McGregor) and their predacious mites on leaves and fruits of two citrus varieties, navel orange and balady orange at Tukh and Qalub districts, Qalubia Governorate during the two successive years.	38
2.1-Population dynamics of adults of citrus black insect, <i>C. aonidum</i> (L.) on leaves and fruits of navel orange and balady at Tukh and Qalub district during the two successive years.	38
2.1.1-Population dynamics of navel orange at Tukh district during the two successive years.	38
2.1.2-Population dynamics of balady orange at Tukh district.	44
2.1.3-Population dynamics of navel orange at Qalub district.	46

	40
2.1.4-Population dynamics of balady orange at Qalub district .	49
2-2- Population dynamics of adult females of purple scale insect, <i>Lepidosaphes beckii</i> (Newman) on leaves of two citrus varieties, at Tukh district, Qalubia Governorate during two successive years.	54
2.2.1-The population dynamic of navel orange trees.	54
2.2.2-The population dynamic of balady orange trees.	54
2.3-Population dynamics of movable stages of citrus red mite, <i>Panonychus citri</i> (McGregor) on leaves and fruits of two citrus varieties, navel orange and balady orange at Tukh and Qalub districts at Qalubia Governorate.	58
2.3.1-Population dynamics of movable stages of citrus red mite, <i>P. citri</i> (McGregor) on leaves and fruits of two citrus varieties, navel orange and balady orange at Tukh districts	58
2.3.1.1-Population dynamics in navel orange at Tukh districts.	58
2.3.1.2- Population dynamics in balady orange at Tukh district	62
2.3.2-Population dynamics of movable stages of citrus red mite, <i>P. citri</i> (McGregor) on leaves and fruits of two citrus varieties, navel orange and balady orange at Qalub district.	66
2.3.2.1-Population dynamics of navel orange at Qalub district.	66
2.3.2.2- Population dynamics of balady orange at Qalub district.	69
2.4-Population dynamics of predacious mites associated with black scale insect, <i>Chrysomphalus aonidum</i> (L.) and citrus red mite, <i>Panonychus citri</i> (McGregor) on navel orange and balady orange varieties, at Tukh and Qalub districts at Qalubia Governorate .	74
2.4.1- Population dynamics at Tukh districts.	74

2.4.2- Population dynamics at Qalub districts.	78
 3- Correlation between the predacious mites and <i>P. citri</i> (McGregor) on two citrus varieties, navel orange and balady orange at Tukh and Qalub districts. 	82
3.1-In Tukh district.	82
3.1.1- Correlation on navel orange.	82
3.1.2- Correlation on balady orange.	82
3.2- In Qalub district.	86
3.2.1- On navel orange.	86
3.2.2- On balady orange .	86
 4- Correlation between the predacious mites and black scale insect, <i>Chrysomphalus aonidum</i> (L.) on two citrus varieties, navel orange and balady orange at Tukh and Qalub districts. 	90
4.1- In Tukh district.	90
4.1.1- Correlation on navel orange.	90
4.1.2- Correlation on balady orange.	90
4.2- In Qalub district.	94
4.2.1- Correlation on navel orange .	94
4.2.2 Correlation on balady orange .	94
5-Biological control studies	98
Releasing of predatory mite, <i>Neoseiulus californicus</i> (McGregor) for controlling the citrus red mite, <i>Panonychus citri</i> (McGregor) on seedlings of navel orange at open field.	98

LIST OF TABLES

Tables	Page
Table 1 : Survey and incidence of insect pests associated with leavesand fruits of two citrus varieties, navel orange and baladyorange at two districts, at Qalubia Governorate during periodfrom September, 2015 to August, 2017.	24
Table 2 : Survey and incidence of phytophagous mites collected from two citrus varieties, navel orange and balady orange at two districts, Qalubia Governorate during period from September, 2015 to August, 2017.	29
Table 3 : Survey and incidence of predacious insects and mitescollected from two citrus varieties, navel orange and baladyorange at two distincts, Qalubia Governorate during periodfrom September, 2015 to August, 2017.	33
Table 4 : Survey and incidence of miscellaneous mites collected from two citrus varieties, navel orange and balady orange at two districts, Qalubia Governorate during period from September, 2015 to August, 2017.	36
Table 5 : Population dynamics of adults of Chrysomphalus aonidum(L.) on leaves and fruits of two citrus varieties, navel orangeand balady orange at Tukh district during period fromSeptember, 2015 to August, 2016.	40
Table 6 : Population dynamics of adults of Chrysomphalus aonidum(L.) on leaves and fruits of two citrus varieties, navel orangeand balady orange at Tukh district during period fromSeptember, 2016 to August, 2017.	42

Table 7 : Population dynamics of adults of Chrysomphalus aonidum(L.) on leaves and fruits of two citrus varieties, navel orangeand balady orange at Qalub district during period fromSeptember, 2015 to August, 2016.	47
Table 8: Population dynamics of adults of Chrysomphalus aonidum(L.) on leaves and fruits of two citrus varieties, navel orangeand balady orange at Qalub district during period fromSeptember, 2016 to August, 2017.	50
Table 9: Population dynamics of adult females of purple scaleinsect, L. beckii (Newman) on Leaves of two citrus varieties,navel orange and balady orange at Tukh district during thetwo successive years, 2015 / 16 and 2016 / 17.	56
Table 10 : Population dynamics of movable stages of <i>Panonychus</i> <i>citri</i> (McGregor) on leaves and fruits of two citrus varieties, navel orange and balady orange at Tukh district during the first year, from September, 2015 to August, 2016.	60
Table 11 : Population dynamics of movable stages of Panonychuscitri (McGregor) on leaves and fruits of two citrus varieties,navel orange and balady orange at Tukh district during thesecond year, from September, 2016 to August, 2017.	64
Table 12 : Population dynamics of movable stages of <i>Panonychus</i> <i>citri</i> (McGregor) on leaves and fruits of two citrus varieties, navel orange and balady orange at Qalub district during the first year, from September, 2015 to August, 2016.	67
Table 13 : Population dynamics of movable stages of Panonychuscitri (McGregor) on leaves and fruits of two citrus varieties,navel and balady orange at Qalub district during period thesecond year from September, 2016 to August, 2017.	72

Table 14: Population dynamics of predacious mites associated with black scale insect, C. aonidum (L.) and Panonychus citri (McGregor) on navel orange and balady orange varieties at Tukh district during the two successive years, from September, 2015 to August, 2017.	76
Table 15 : Population dynamics of predacious mites associated with black scale insect, <i>C. aonidum</i> (L.) and <i>Panonychus citri</i> (McGregor) on navel orange and balady orange varieties at Qalub district during the two successive years, from September, 2015 to August, 2017.	
Table16: The monthly total number of Panonychus citri(McGregor) and the predacious mites on leaves and fruits of two citrus varieties, navel and balady orange at Tukh district during the two successive years, from September, 2015 to August, 2017.	
Table17: The monthly total number of Panonychus citri (McGregor) and the predacious mites on leaves and fruits of two citrus varieties, navel and balady orange at Qalub district during the two successive years, from September, 2015 to August, 2017.	88
Table 18 : The monthly total number of Chrysomphalus aonidum(L.) and the predacious mites on leaves and fruits of twocitrus varieties navel and balady orange at Tukh districtduring two successive years, from September, 2015 toAugust, 2017.	92

Table 19 : The monthly total number of <i>Chrysomphalus aonidum</i> (L.) and the predacious mites on leaves and fruits of twocitrus varieties, navel orange and balady orange at Qalubdistrict during the two successive years, from September,2015 to August, 2017.	96
Table 20 : Biological control of citrus red mite, Panonychus citri(McGregor) using the predatory mite, Neoseiuluscalifornicus (McGregor) on citrus seedling at two level ofrelease.	101

LIST OF FIGURES
